

JOSEPH II CENSUS OF 1784-1787 IN ZARAND COUNTY*

Ionuț-Cosmin CODREA**

The land of Zarand is a well-delimited geographic and ethnographic area, with a well-defined historical identity, lying between the western, mountainous parts of the old Zarand County and the eastern plains. The western part of the Apuseni Mountains rises as a row of mountainous massifs, isolated by broad alluvial depressions, which look like bays on a map and are actually intermountain plains. Through these tectonic depressions is made the link between the valleys of the Black Criș and the Mureș, the so-called Deva - Beiuș depression corridor.¹

This region stretches along the White Criș, marked in the north by the Codru Moma Mountains and by the mountains of Bihor and Zarand, while to the south by the Metaliferi Mountains. Geographers recognise, generally, the unitary character of this Zarand "County," although between Gurahonț and Leasa the continuity is recognised only in the White Criș Valley. In the east, the intermountain valley (also called the Brad Basin) continues until Săcărâmb, in a region that generically belongs to the Metaliferi Mountains, while downstream it continues until Gurahonț.²

In the 18th century, administratively speaking, the Land of Zarand had reached the end of a long journey and had turned from a part of the old County of Zarand (constituted around the eponymous fortress in the 12th and 13th centuries) into a county in its own right, through the "Karolin Resolution" of 31 December 1732, issued by Emperor Charles VI.³

The decision to carry out the Joseph II Census of 1784-1787 is part of a set of administrative measures implemented by the monarch "Aufklärer" Joseph II, which he wanted to be a more vigorous continuation of the reforms started by Maria Theresa.

The first step in this regard was made in 1783, when, by imperial decree, Transylvania was divided into 10 counties. The following year, their number increased to 11. The new administrative-territorial entities no longer took into account the former territories of the privileged nations (Hungarians, Szeklers and

* This paper has been prepared with the financial support of the project "Quality European Doctorate-EURODOC," contract no. POSDRU/187/1.5/S/155450, project co-financed by the European Social Fund through the Sectoral Operational Programme "Human Resources Development" 2007-2013.

³ Edroiu, Cernovodeanu 2002, p. 43-44.

Saxons), which had functioned based on now anachronistic feudal law. Therefore, the purpose of the emperor was to modernise and standardise the administration of Transylvania, making it the same as in the other parts of the Habsburg Empire.

In this new administrative equation, the imperial Rescript (edict) of 3 July 1784 provided the organisation of a county that was to bear the name “Hunedoara, united with Zarand” (Latin: *Comitatus Hunyad cum Zarand unitus*). The same legislation stated that this new administrative structure would be divided into three Circles (Latin: *Cerculi*), headed by a Viscount substitute. Due to the large size of the new county, the Gubernium in Sibiu approved its division into four Districts: Hațeg, Zarand, “This Side of Mureș” (Latin: *Cis Marusianus*) and “Beyond Mureș” (Latin: *Trans Marusianus*).⁴

The next stage was that of a new census, which was intended to accurately estimate the relationships between the landowners and their subjects, with the results to be used as the basis for future land regulations. The manner of carrying out the census was regulated by the imperial Rescript of 1 October 1784.

Such censuses had been carried out in Transylvania before, for establishing the population number, determining taxes or the number of Romanians, according to their faith. The new Joseph II Census had, however, a more comprehensive nature, introducing the basic rules of modern population assessments: simultaneity of information capture and uniformity of rules, criteria leading to a greater accuracy of information. One of the main characteristics and revolutionary novelties of this population census was exhaustiveness.⁵

Census data gathered in the county Hunedoara, united with Zarand, in 1784-1787, have been researched and published by Traian Bălan;⁶ then by Liviu Botezan and Roland Schilling, in a paper divided into three parts, focused in particular on the area south of the River Mureș;⁷ then by Mihai Cerghelean, with special focus on the Land of Hațeg;⁸ by Ion Frățilă and Iosif Jivan, for the Deva area;⁹ and, more recently, by the late historian Vasile Ionaș.¹⁰

Nevertheless, these studies have not dealt with the population census that took place approximately at the same time. These census results have been published in a paper by Danyl Dezső and Zoltán David, who cover the whole territory of Hungary. Data about the number of houses, of families and of residents can be found in the tables of the census. The population is divided by gender, marital and social status, including statistics about the number of children, grouped by age. One criterion that is notably missing is religion, proof that the imperial government was interested in the secular aspect of the expected reforms.¹¹

¹¹ Dezső, Dávid 1960. Hunedoara County settlements are between pages 376 and 387.

Some census related documents are kept in the National Archives of Romania, Hunedoara County Department, in three cases, and are likely to bring new data, at least regarding the census carried out in the Land of Zarand. From an archival perspective, we identified these sources in the records of Hunedoara Prefecture, under the following numbers: no. 70/1785 and no. 33/1786 - the census conducted by settlements - and no. 3/1787 - the census conducted by boroughs (the lowest-level administrative unit - Latin: *Processus*).¹²

We will speak, in the beginning, about the census stages and about any further information concerning the landowners.

Note that religious confession appears among the data gathered in 1787, a particular situation, since it had not been mentioned in the previous years, nor in the general census.¹³

During the 11 March 1785 meeting, the *Tabula continua* of the county Hunedoara, united with Zarand, analysed Decree No. 1185, issued by the Transylvanian Gubernium on 18 February 1785, regarding the progress of the census, and decided that the census commissioners would be starting their activity after 9 April 1785.¹⁴ In the Land of Zarand, the census was carried out in two stages: a first phase in late 1785 and early 1786 and a second phase during the months of May to November 1787. The second stage of the census was due to the order of Transylvanian Gubernium, no. 6321/5 April 1787, which stated that the census should be revised.¹⁵

The census commissioners used standard tables, printed on watermarked paper, and the ends of the table were written in four languages: Hungarian, German, Latin and Romanian (the Romanian text written in Cyrillic). In the first stage of the census, the printed tables were only in Latin and Romanian, although with Cyrillic script. In the second stage they used all the presented languages. German was used only in the case of Baia de Criș borough.

Significantly, in these questionnaires appears translated into Romanian the type of data that were to be recorded; the detail indirectly suggests the number of Zarand's ethnic Romanian administrative staff. For example, in the census sheets of 1785 and 1786 all tabular data are translated into Romanian: "numele domnilor" (name of the lords/landowners), "numărul casălor" (number of houses), "numărul familiilor creștinilor" (number of Christian families), "numărul jidovilor" (number of Jews), "creștini, parte bărbătească" (male Christians), "popi" (priests), "nemeși" (nobles), "dregători și cei mai de cinste" (bureaucrats and most honoured people), "orășani în orașe și meșteri prin sate" (city dwellers in the city and craftsmen in villages), "proști" (peasants), "cei ce urmează meșteșugul" (those who follow a craft), "grădinari, lucrători pe zi și cei ce cu munca mânilor își câștigă hrana" (gardeners, day labourers and those that earn their meals by manual labour), "din răghiment" (of regiment), "aicea să cuprinde partea fâmeiască" (here are to be mentioned the females).

¹² HCDNAR, fund *Prefecture of Hunedoara County*, file no. 70/1785; file no. 33/1786; file no. 3/1787.

¹⁴ Ionaș 2012a, p. 173.

¹⁵ HCDNAR, fund *Prefecture of Hunedoara County*, file no. 3/1787, p. 1.

The ends of the table were divided into five columns, each divided into a specific number of sections. In the following, we shall present the table rubrics:

The first column contains the name of the property and of its landlord (Latin: *Nomina dominiorum*).

In the second column, there were specified the number of houses and of families, the latter divided into “Christian” and “Jew” (in the late 18th century the Jews were not yet politically emancipated in Transylvania).

The third column noted the social status of the Christian men - ex.: “priests,” “proprietors,” “bureaucrats,” “craftsmen,” “peasants,” “day labourers”, “the number of those who cannot work.” The number of children (divided into two age groups: 1-12 year olds and 13-17 year olds) and the marital status of Jewish males (married, unmarried, widowed) were also covered here. The female population was recorded in the same column, but under a separate heading (“here are to be mentioned the females”).

The fourth column is subdivided into two parts: the first contained the marital status of the Christian men (married, unmarried, widowed) and the number of those who had left the village (be they still in the country or abroad). The second part recorded the number of foreigners living in the village (men and women from other parts of the empire or from across the borders).

In the period 1785-1786, the census was made by settlements and was carried out by a single census commissioner, named Michael Makaj. This bureaucrat failed to cover the entire region of Zarand Circle, in 1785 gathering data only in a small number of settlements, more specifically in only 14 villages: Baia de Criș, Dupăpiatră, Grohot, Groși, Hălmăgel, Dumbrava de Jos, Ociu, Ribicioara, Sârbi, Tomnatec, Țebea, Uibărești and Vața de Jos. In January 1786, he assessed another 10 villages: Aciuța, Aciua, Bulzeștii de Jos, Dumbrava, Gura Văii, Poiana, Pleșcuța, Rostoci, Tălagiu and Vidra.¹⁶

The unsatisfactory results led to the Gubernium in Sibiu demanding the revision of the census. From May to November 1787, the census was resumed. This time, the assessment was not made by settlements but by boroughs. The headings of the table remained the same, with one change. Over the column registering the domain owner's name on the initial table was stuck a piece of paper, on which were recorded: the number of residents, the settlement's name (Latin: *nomina pagorum*), the proprietor (Latin: *nomina possessorum*), and the number of faiths followed in the settlement.

Another change is that there was not just one man to carry out the census anymore, but it was carried out by local notaries or borough commissioners:

Processus Körös-Bánya: Baia de Criș, Rișca, Țebea, Caraci, Lunca, Cărăstău, Birtin, Tărătel, Prihodiște, Vața de Sus, Vața de Jos, Căzănești, Ciungani, Prăvăleni and Basarabasa. Their census was done by local official Georg Olajos;¹⁷

Processus Bleseny: Blăjeni, Buceș, Dupăpiatră, Mihăileni, Potingani, Stănița, Zdrapți and Valea Brad. Their census was done by local official Ferentz Balog, then by the commissioner of Blăjeni borough, Francisc Zohanie;¹⁸

¹⁶ Ibid., file no. 33/1786, p. 7-10, 16-49.

¹⁷ Ibid., file no. 3/1787, p. 9, 21.

Processus Brad: Brad, Curechi, Bucureşci, Crişcior, Tărătel, Ruda Brad, Luncoiu de Jos, Podele, Luncoiu de Sus, Scroafa (Stejarel), Mesteacăn. Their census was done by Stephanus Kristsori and later by the local notary, Andreas Laszloffy;¹⁸

Processus Nagy-Halmagy: Hălmagiu Mare, Tisa, Tărmure, Ioneşti, Ocişor, Ociu, Poienari, Țoheşti, Hălmăgel, Sârbi, Luncşoara, Vozdoci, Brusturi, Cristeşti, Băneşti. Census performed by Joseph Ambrassi as well as by Stephanus Pönfinus;¹⁹

Processus Csuts: Ciuci (today Vârfurile), Aciua, Aciuţa, Poiana, Pleşcuţa, Gura Văii, Rostoci, Dumbrava (*Dsunăk*), Tălagiu, Vidra, Măgulicea, Mermeşti, Lazuri, Groşi, Leasa, Bodeşti și Tomeşti. Their census was done by commissioner Lucas Both and by the commissioner of the Ciuci borough, Franciscus Szente;²¹

Processus Riskulitză: Rîscuţi, Baldovin, Brotuna, Dobrot, Leauş, Obârsa, řteia, Tiuleşti, Târnava și Târnăviţa. Census performed by Michael Kovacs and then by the commissioner of Rîscuţi borough, Michael Osztrovi;²²

Processus Szelistie: Sălişte, Hărtăgani, Ormindea, Călimăneşti-Băiţa, Peştera, Crăciuneşti, Trestia, Căinelul de Sus, Băiţa. Census performed by Mojses Balog and by Josephus Horváth;²³

Processus Ribitze: Ribiţa, Uibăreşti, Grohot, Bulzeşti, Ribicioara, Tomnatic, Dumbrava, Vaca. Their census was done by the commissioner of the Ribiţa borough, Daniel Ranossoni.²⁴

Various particular cases can be noticed at this stage too. All boroughs, except Ribiţa, have two tables, made by different census commissioners. The census period is also different. Some of them can be grouped in the period May to July 1787 and the other in October to November of the same year. A particular case is Baia de Criş borough, where both tables are less accurately dated, only the year being mentioned.

Documentation of the decision to resume work in the autumn of 1787 has not survived, but it can be noticed based on the data differences between entries. The most important information, which is not shown in the tables made in late 1787, is that of the residents' religion.

A common point of the two 1787 assessments is the indication of the landlords (*possessorum*) from the Land of Zarand. We encounter names of important noble families of the Hinterland: Hollaki, Kozma, Brádi, Ribiczei, Kristyori, Türi, Csiszár, Nemes and Szebeni. However, there are also small armorial noble families, most of them in the village Baldovin.²⁵ We also meet some noble families from parts of Hunedoara, such as Josika, Nalaczi and General Francisc Gyulay. There are also some long established family clans of the old Transylvanian elite: Bethlen,

Teleki and Bornemisza. Beside these private properties, there were also state-owned areas: the domain of Hălmagiu and that of the royal fortress of Deva.

Due to its tabular nature, the census of 1784-1787 is a valuable source of historical demography for the parts of Zarand. Firstly, it reveals concrete data on the administrative-territorial organization of the territory toward the end of the 18th century. At the same time, it encompasses the local demographic potential, differentiated by gender - male and female - which represents a new direction compared to the medieval censuses, which recorded only the male residents. The recorded details reveal the employment profile of the locals, exposing the existence of a small core of “city dwellers” in the Land of Zarand, and, as such, the rise of a lesser bourgeois society. The statistical data related to employment (as well as those regarding the land-working peasants) expose the economical landscape of the area.

The clerics are shown as well, which is important when analysing the state-church relationship. The data about the local noble elite and its domains have their own importance too. In addition, the census involved a great number of local bureaucrats, notaries, borough commissioners and revisers, which shows that in this area the bureaucratic organisation was already viable at the end of the 18th century, obviously as the successful result of implementing the Austrian methods of modern administration. That the headings of the census tables have been translated into Romanian shows the attitude of the Imperial administration towards the Romanian ethnic majority, but also the emergence of the Romanian population on the political stage. Of course, the 1784-1787 period marks a rather long detente, but the late date of the census could be due to the 1784 revolt, since it is well-known that the Land of Zarand was at the epicentre of this violent social movement.

Josephe II Census of 1784-1787 in Zarand County

(Abstract)

The Hunedoara County Department of the National Archives of Romania keeps, in three files, a great number of documents related to the Josephe II census conducted between 1784 and 1787. These documents provide new information regarding the census carried out in Zarand County. The census of Zarand County was conducted in two phases: the first phase was from late 1785 until early 1786, and the second phase took place during the months of May to November 1787. Due to its tabular nature, the census of 1784-1787 is a valuable source of historical demography for the parts of Zarand County. Firstly, it reveals concrete data on the administrative-territorial organisation of the territory toward the end of the 18th century. At the same time, it encompasses the local demographic potential, differentiated by gender - male and female - which represents a new direction compared to the medieval censuses, which recorded only the male residents. The statistical data related to employment (as well as those regarding the land-working peasants) expose the economical landscape of the area. The census hired a variety of local administrators from notaries and borough commissioners to reviewers, which demonstrates that the Austrian administrative system had been successfully implemented by the end of the 18th century. The fact that the tabular entries are translated into Romanian reveals the attitude of the imperial administration in relation to the Romanian majority population. Of course, the 1784-1787 period marks a rather long detente, but the late date of the census could be due to the 1784 revolt, since it is well-known that the Land of Zarand was at the epicentre of this violent social movement.
