

ORIENTAL INFLUENCE IN CERAMIC FRAGMENTS DISCOVERED IN UNIRII PLAZA, ORADEA

Marian TRANDAFIR*

Ştefan LIPOT**

Florin SFRENGEU***

Abstract. In the course of an archaeological survey at Unirii Plaza in the centre of Oradea, in the area known as the “Saturday townlet”, several ceramic fragments were found, among which a number of pots and pipes bore signs of oriental influence. This type of ceramic, which often appears in Ottoman occupation zones such as the Pashalikes of Timișoara and Oradea in the former Hungarian Kingdom, is rarely studied in Romanian historiography. This article aims to address this by adding to the repertoire of oriental or oriental-influenced discoveries in Romania.

Keywords: Oradea, Pashalike, oriental influence ceramics, pipes, former Hungarian kingdom.

During the course of rescue excavation prior to the renovation of Unirii Plaza on Oradea, Romania, some fragments of ceramics bearing signs of oriental influence were found.

In 1660, Oradea was designated the centre of a Pashalike, triggering a period of great transformation as the city became included in the economic circuit of the Ottoman Empire, a fact reflected in the archaeological material found during the excavations, both in the fortress of Oradea and the adjacent townlet.¹

In one excavation, under a pedestrian crossing located 8.5 m in front of the church of Saint Ladislaus, 1.6 x 1.6 m in cross-section and at a depth of 1.1 m, the remains of an old brick pavement were discovered. The pavement was about 0.25-0.30 m thickness, and was connected with the first construction phase of the church, which began in 1720. Under this, in the alluvial soil at a depth of up to about 2.60 m, a large amount of ceramic material mixed with osteological fragments, mortar and stones, was discovered, probably a flatting. From the recovered material, a number of ceramics bearing oriental influences were found, including pipes, a patterned tile, a crucible and a bone tool.²

¹ Borcea 2005, p. 284-295.

² Material related with the economic activities carried out in the Unirii Plaza (the former “Saturday townlet,” Zombathely vicus) and with the three ceramic kilns discovered in the immediate vicinity in 1991 (see also Ignat, Marta 2004, p. 87-102).

This article deals with these oriental-influenced ceramics discovered in the fortress of Oradea and their analogies;³ the rest of the equally particular material from this archaeological survey will be explored in another article.

After being conquered by the Turks, Oradea was integrated in to the Ottoman Empire. Three years after the fortress was occupied, Evlia Celebi, a local eyewitness to the destruction of the settlement during the siege, was pleasantly surprised by the prosperity and the flowering of the city. He describes the annual bazaar, which was held 40 days before Easter on the plateau in front of the fortress, where for 20 days merchants gathered “out of the seven climates,” including India, Yemen, Arabia and Persia.⁴

Although the period of Turkish rule was short-lived, evidence of the Ottoman culture is illustrated through a series of artefacts that were found during archaeological research.

1. Ceramic fragment, belonging to a bowl, is made from fine red ceramic paste, well-fired. It features a yellow enamel interior and dark red stylized vegetal decoration, and a brown outline. At the top of the rim it bears three thin brown bands. The bowl's diameter was 280 mm. There are obvious signs of secondary burning (**fig. 1**).

2. Ceramic fragment, belongs to a bowl made from a similar fine red paste, with yellow enamel on the inside, dark red and green stylized vegetal decoration, and a brown outline. On the external side the fragment has a grip/hang button (**fig. 2**).

3. Ceramic fragment, smaller in size and harder to fit typologically, has identical enamel, this time on the outside. The ornamentation, which can be classified as vegetal, has shades of dark red and green, with the same brown outline⁵ (**fig. 3/3** and **fig. 4/3**).

The three fragments described above, all from different pots, are most likely from the same workshop, given that the ceramic paste, enamel, decoration and firing-process are so similar.

Another four fragments, also produced from fine red, well-fired ceramic paste, had a light green enamel, brownish-green stylized vegetal decoration, and a brown outline. These four smaller pieces, which are difficult to fit typologically, may have originated from one or more bowls or platters (**fig. 3/1-2, 4-5** and **fig. 4/1-2, 4-5**).

Considering that, from a typologically point of view, the material discovered is inferior to ceramics produced in the traditional Turkish

centres of Anatolia (Iznik and Kutahya)⁶ and similar to items found in Hungarian territory (Buda, Eger, Pécs, Szeged, Szolnok, Tata),⁷ we conclude that they came from workshops located within former Hungarian kingdom areas that were incorporated to the Ottoman Empire. Thus, although catalogued as oriental ceramics, typologically they fit with those developed under the Turkish occupation, but from a relatively local area.

Along with the aforementioned potsherds, six clay pipes fragments were found (**fig. 5** and **fig. 6**).

1. Pipe fragment made from fine clay with sand inclusion, red brick colour from oxidation firing with engobe. The junction between the bowl and the leg is V-shaped and decorated with three rows of interrupted lines executed with a cogwheel. The ring is hemispherical and decorated with three rows of interrupted lines, executed with the same cogwheel (dimensions: length = 58 mm; leg diameter = 16 mm; ring diameter = 23 mm; bowl diameter = 22 mm) (**fig. 5/6** and **fig. 6/4**).

2. Pipe fragment similar to the previous one in terms of the composition of the material from which it was produced and its appearance, but grey in colour due to the firing process (length = 58 mm; diameter = 17 mm; ring diameter = 23 mm) (**fig. 5/5** and **fig. 6/6**).

3. Pipe fragment similar to the above, of a brick colour, the only difference being that the junction between the bowl and the leg, as well as the ring, are decorated with only two rows of interrupted lines (length = 58 mm; diameter = 17 mm; ring diameter = 23 mm) (**fig. 5/4** and **fig. 6/5**).

4. Pipe fragment produced from fine clay with sand inclusions, red brick colour, with engobe. Only a part of the leg has been preserved with a hemispherical ring decorated with three incised rings made with the cogwheel (diameter = 16 mm; ring diameter = 22 mm) (**fig. 5/1** and **fig. 6/1**).

5. Pipe fragment produced from fine sandy clay, oxidation-fired with engobe. Only a small part of the bowl with the leg and a hemispherical ring has been preserved. The bowl has two spherical impressions, probably a five or six petal rosette, and the ring is decorated with a circular incisions made with a sharp object (ring diameter = 21 mm) (**fig. 5/3** and **fig. 6/3**).

6. Pipe fragment produced from a fine clay, reddish in colour, oxidation-fired with engobe. The leg with a ring and a small part of the bowl have been preserved. The bowl bears a pattern of parallel lines and incised points; the hemispherical ring, which is separated from the leg with a nervure, is decorated over its entire surface with oblique parallel lines

⁷ Soproni 1956, p. 102-106; Puszta 1999, p. 471-483; Bertalan 2004, p. 51-52; Yenischirlioglu 2004, p. 373-382; Hancz 2006, p. 31-46; Kertész, Bana 2010, p. 60-86.

suggesting a turban (length = 31 mm; leg diameter = 11 mm; ring diameter = 22 mm) (**fig. 5/2** and **fig. 6/2**).

The first four fragments (number 1-4) can be classified under the same typology, since they were produced according to the same pattern, the differences primarily consisting in the appearance they received during the firing process and the decoration that was applied after removal from the mold. Based on the Hungarian classification system, the authors classify these pieces under the type I “Hungarian” pipe, which appeared in the last two decades of the seventeenth century.⁸ We acknowledge that this type first appeared in the territory of the former Hungarian kingdom, but the context of the discovery, along with the oriental influence of ceramics from the same zone, lead us to believe that the genesis and diffusion of this type took place during the Turkish occupation of the area.⁹

The fifth fragment has a more rudimentary form. Ornate, with a rosette and an incised ring, it is harder to fit typologically. It is probably from the second half of the seventeenth century, and bears close analogy with a similar piece, still unpublished, found in the fortress of Oradea in unclear stratigraphic conditions. A similar impression - a floral motif with five petals - appears on a glazed Turkish pipe discovered in Timișoara.¹⁰ The last pipe fragment, with an analogy known and published in Reghin, dates back to the seventeenth century.¹¹

It is hoped that these items will add to the currently limited number of publications regarding oriental or oriental-influenced ceramics which originated beyond the traditional centres of Asia Minor.¹²
